

Using your kitchen measurements (**STEP 1**), and the list of cabinets you chose (**STEP 2**) start sketching your cabinet layout.

Keep in mind that **each large square equals one foot** (*one foot equals 12 inches*) and **each small square equals three inches**.

Be sure to note the locations of doors, windows, electrical outlets, plumbing fixtures, ventilation, and major appliances (*see example below*).

After you have completed your kitchen layout drawing, bring it to one of our stores. Our professional staff will discuss it with you and any possible changes will be made.

A computerized 3-dimensional layout will be presented. This will give you a realistic rendering of your new kitchen!
